Enhancing Productivity by Managing a Variety of Recipes

Switching between 20 Recipes

Program pattern operation

- Program pattern consists of up to 20 segments
- 2-loop program pattern can be operated

Easy to switch between recipes with a PLC

- Since CC-Link, Profibus, and DeviceNet are supported, it is easy to link to a PLC that manages recipes

Application examples

2-loop control with a single controller

- 2-loop synchronous and independent operation is available

- The start and stop instructions can be run synchronously or independently.

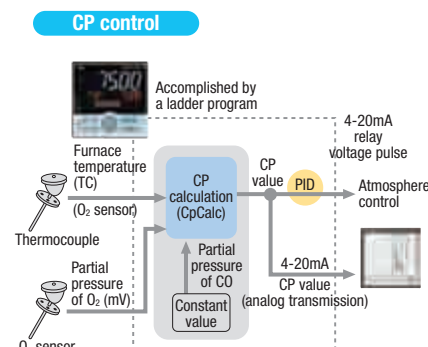

- Program pattern operation and constant value operation are available for 2-loop control

- A sequence can be run by combining the program pattern operation and fixed-point operation.

A variety of arithmetic instructions and large capacity ladder programs

- 15 basic instructions and 111 application instructions
- Ladder program capacity up to 1,000 steps

CP control

Program Controller UP55A (Standard model)

Main Features

- Up to 99 program patterns
- 8 PV events, 16 time events, and 8 alarms can be monitored simultaneously
- Ladder sequence programs can be built
- Simple operation
